ABSTRACT OF THE DISCLOSURE

A bicycle carrier for supporting a bicycle with respect to a motor vehicle. The carrier has a rod having a conical or cylindrical portion. The conical or cylindrical portion of the rod is sized so that it fits snugly within the seat receptacle of the bicycle once the seat has been removed. A bicycle is supported on the carrier by removing the bicycle seat and placing the seat receptacle over the rod. Next, the seat receptacle is tightened onto the rod, securing the bicycle to the carrier.
